

# Transformation Assurance

Building trust and managing risk for a successful transformation.

As a leading Trusted Advisor for transformation programs, we help our customers protect project investments and generate sustainable value. Together, we focus on the core objectives of a successful transformation and identify risks in a timely manner.

## Focus on the customer's vision

In various business areas, companies have to deal with a variety of transformation projects including:

- IT system change, for example Enterprise Resource Planning or Custom Development – to SAP S/4HANA
- Further development of the business model and/or company organization, for example towards an Agile & DevOps environment
- Regulatory changes, for example the implementation of the DSGVO, product compliance or international accounting standards
- Innovation and development of new products and services
- Mergers & Acquisitions and Carve-outs
- Change management and empowerment of human resources

## Range of services

Together with our customers, we analyze how to reach their goals, taking into account the customer's competencies and strengths. We focus on both service delivery and results to ensure the client's strategic vision is achieved. Through our relevant experience in individual industries, technologies and transformation projects, we know which factors enable a successful transformation. Accordingly, we can quickly offer and establish the right type of support.

### Program Management

- Project Risk Management
- Project Quality Management
- Project Management Office (PMO)

### Project and Program Assurance

- Project Management
- Compliance
- Quality assurance
- System migrations

## Competencies & Tools

We support your transformation projects with our experts within the scope of classic projects such as Prince2 or PMI PMBOK as well as in the area of agile projects based on SCRUM, SAFe or SAP ACTIVATE. In addition to this methodological expertise and many years of experience, we have extensive expert knowledge in systems such as Oracle, SAP and SAP S/4 HANA.

## Value proposition

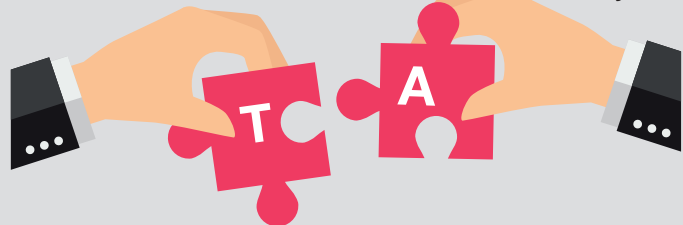

Transformation assurance is an essential component of an effective governance structure. We show stakeholders potential problems and risks by means of future-oriented indicators, in order to derive appropriate measures early on to ensure the long-term success of the program.

### These indicators include:

- Independent Transformation Assurance at portfolio, program and project level
- Proactive risk identification and handling
- Continuous feedback to responsible stakeholders (sponsors & management)
- Supervision of the value realization
- Benchmarks with PwC's best practices and standards
- Protection of investments and the goal of transformation
