Which measures allow for a cost-efficient transformation?

What is our sector's transition pathway?

What does our implementation roadmap look like and what investments does our company need to make?

The “Pathways to Paris” transformation tool assists you in detailing your company’s path towards climate neutrality and in implementing the associated measures in a cost-efficient manner.

What makes the transformation tool stand out?

- Climate and industry experts from PwC Germany and WWF Germany developed the tool as part of the “Pathways to Paris” project.
- The tool is based on the scenario “Towards a Climate-Neutral Germany by 2045”, which was published by leading research institutions in Germany in 2021 as a reference for sector-specific transformation pathways that align with the targets of the Paris Climate Agreement.
- The requirements and assumptions were validated in a series of 30 workshops with over 80 actors from the real economy, the financial sector and academia.
- It is available as a free-of-charge web-application without any data being stored.

How does the tool benefit the transformation of your company?

Three steps are needed to arrive at your customized transformation pathway:

1

Thanks to sector-specific transition pathways, you will be better able to understand the minimum requirements for reducing emissions in accordance with the Paris Climate Agreement.

2

The tool allows you to test the effects and costs of various reduction measures and provides you with an overview of the outcomes in graphic form.

3

You can plan the implementation of the selected measures (roadmap) and assess the cost implications of the transformation plan over time.

About PwC

With over 12,000 dedicated employees at 21 locations, PwC is the leading auditing and consulting firm in Germany.

Playing an active role in the net zero transformation is a key concern for PwC. We are participating in the leading initiatives of the real economy and the financial sector, such as the Science Based Targets initiative, the Carbon Disclosure Project, the Task Force on Climate-related Financial Disclosures, the European Financial Reporting Advisory Group, the Energy Efficiency Financial Institutions Group and the United Nations Environment Programme Finance Initiative, or are cooperating with them.

About the WWF

WWF Germany is part of the international environmental protection organization World Wide Fund For Nature (WWF).

For more than 50 years, the WWF Network has been working around the world to stop environmental destruction and to bring about a future in which humanity and nature live in harmony with each other. WWF Germany is currently participating in more than 100 national and international projects aimed at preserving biological diversity and the natural prerequisites for life. It has more than 500,000 sponsors that assist it in these efforts.
