

Transform Your Tax Data & Processes with Agentic AI Automation

Tax Intelligence Suite | Be Tax Live

Revolutionize your tax data and processes and stay one step ahead – with intelligent AI automation at scale!

What we offer

Our goal is to sustainably optimize your tax data and processes through intelligent automation.

Tax Intelligence Suite is installed directly in your SAP system and brings GenAI into your ERP landscape.

We extract tax-relevant information and deliver structured data output used **in real time** within your ERP to automate the tax determination and other tax processes **before posting**. By combining a rule-based approach with **flexible AI agents**, we evaluate individual aspects of tax determination separately and reach a combined, accurate and reliable result. AI-enabled data acquisition ensures that all available data sources are used – including all formats, unstructured data and image documents – thereby enhancing accuracy and reducing manual efforts and compliance risks.

Services

- Seamless integration within SAP (runs on BTP) with structured output directly usable in your ERP in real time
- AI-powered tax code identification and tax determination using combined rule-based and GenAI agent approach
- Automated document formal verification for VAT law compliance – including input VAT deduction validation
- Intelligent document matching: POs ↔ Invoices ↔ Transport Documents ↔ Contracts
- Data acquisition and enhancement from all sources including unstructured documents, images, and e-invoices

Benefits

✓ **Seamless SAP Integration:** leverage SAP BTP as approved platform for internal IT to integrate with your ERP natively.

✓ **Maximize Data Quality:** Extract and enrich tax data from all sources – including unstructured documents, e-invoices and images.

✓ **Reduce Compliance Risk:** Automated VAT verification catches errors before they become costly penalties or audit findings.

✓ **Embedded tax expertise:** PwC provides a tax knowledge base as part of the solution to significantly improve AI accuracy.

✓ **Gaining Process Efficiency by up to 80%:** AI agents handle tax determination and document matching – cutting manual work and errors.

✓ **Full Transparency & Control:** Every AI decision is audit trailed. Combined agent results give you confidence in tax outcomes.

We are here for you!
